

Sandy Blend – Sustainable, Slow Release Soil Amendment and Topdressing

Description:

43% Fresh Bloom, 28.5% sand, 28.5% aged hardwood fines. Our sandy blend, produced at Blue Plains, is a high-performing mix ideal for topdressing lawns while also great for incorporating into soils as a nutrient-rich alternative to compost. This blend is available in bulk (minimum order of 15 cy) to all customers in Virginia, Maryland, DC and Pennsylvania. We can also work with soil blenders interested in manufacturing this blend at their own facility.

Recommended Application Rates

Plant Establishment

Incorporate 20-30% Sandy Blend to a depth of 6-12 inches of existing soil

Turf Establishment

Incorporate 20-35% to a depth of 6-12 inches

Potting soil blending

Incorporate up to 35% Sandy Blend (if making your own blend)

Topdressing - maintenance

Spread ¼ inch Sandy Blend evenly on your lawn to improve soil quality without disturbing turf growth.

Analysis:

Total Nitrogen: ~1.5%

Phosphorus (as P₂O₅): ~2.5%

Potassium (as K₂O): 0

Organic matter: ~34%

C:N ratio: ~9

pH: ~6.5-7.5
