

Woody Blend – Sustainable, Slow Release Soil Conditioner

Description:

Fresh Bloom, aged hardwood fines. Our woody blend, produced at Blue Plains, is a great alternative to compost, providing organic matter as well as nutrients to stimulate improved plant growth of all kinds. This blend is available in bulk to all customers in Virginia, Maryland, DC and Pennsylvania. We can also work with soil blenders interested in manufacturing this blend at their own facility.

Recommended Application Rates

Plant Establishment

Incorporate 20-30% Woody Blend to a depth of 6-12 inches of existing soil

Turf Establishment

Incorporate 20-35% to a depth of 6-12 inches of soil

Potting soil blending

Incorporate up to 35% Woody Blend (if making your own blend)

Topdressing - maintenance

Spread ¼ inch Woody Blend evenly on your lawn to improve soil quality without disturbing turf growth.

Analysis:

Total Nitrogen: ~1%

Phosphorus (as P₂O₅): ~1%

Potassium (as K₂O): 0

Organic matter: ~61%

C:N ratio: ~14

pH: ~7.5–8

"We were in desire of a product to incorporate in helping us reach a desired level of recovery from summer stress in a short amount of time. We have seen great results in large rough areas as well as small areas i.e. fairway and tee spots. Bloom's Woody Blend mixed with the proper seed gives an instant 'bang' and provides prolonged nutrients for the seedlings for a great stand of turf. We are pleased with the results and will continue this great partnership for days to come."
